

PCC-30000 Connection Guide

Input

+ve: +12 ~ 24v dc only. Depending on what voltage you want to drive the LED.

GND: Ground or negative (-ve)

Output

+: Connect to positive voltage intake of LED. Voltage will follow input voltage. If input voltage is 12v, the output will be 12v.

R: Connect to negative voltage of Red LED

G: Connect to negative voltage of Green LED

B: Connect to negative voltage of Blue LED
